Thijn Kroon

Founding Full-Stack Engineer
mail@thijnkroon.nl | Woerden, Netherlands | https://thijnkroon.nl | linkedin.com/in/thijn-kroon

Summary

Founding full-stack engineer at Minerva, responsible for authentication, authorization, and in-app billing across its data and AI platform. Combines product architecture with hands-on delivery across applications, APIs, integrations, and cloud infrastructure. Previously co-founded QuickCode and delivered custom software for clients. Holds an MSc and BSc in Computing Science from Utrecht University, both Cum Laude, with research in automated software testing and a peer-reviewed publication on decentralized governance.

Experience

Minerva — Woerden, Netherlands (remote)
Founding Full-Stack Engineer — Dec 2025 – Present

- Own authentication and authorization end to end. Rebuilt the identity and access-control architecture, migrated applications from Cognito to WorkOS, and established a unified access model for users, API keys, and automated workloads.
- Designed and launched a new in-app billing model using Metronome and Stripe, covering subscriptions, usage metering, allowances, overages, and paid access.
- Architect and develop customer and administrator applications for people search, audience segmentation, enrichment, reporting, and onboarding; coordinate changes across frontend, backend services, shared libraries, and databases.
- Build integrations with CRM, advertising, and database platforms, including connection setup, synchronization, and audience delivery.
- Develop supporting AWS infrastructure and deployment configuration with Terraform; implement background processing, monitoring, and operational tooling, and investigate production issues across services.

QuickCode — Woerden, Netherlands
Co-Founder and Full-Stack Engineer — 2021 – Nov 2025

- Co-founded an independent software-development team delivering web applications, APIs, dashboards, data-collection tools, and workflow automation for clients.
- Managed client requirements and communication while carrying projects through technical design, implementation, deployment, and maintenance, both independently and with collaborators.
- Co-developed the DAO web application template recognized as a winner of Aragon's Best Quickstart dApp category at the 2023 DAO Global Hackathon.

Education

Utrecht University — Master of Science • Cum Laude (8.61/10)
Computing Science — Utrecht, Netherlands • Sep 2023 – Jun 2025

- Specialization in Programming Technology. Thesis: Evaluating Search Strategies in Dynamic Symbolic Execution for Java Test Generation; grade 8.8/10.
- Designed and implemented MAZE, a modular dynamic symbolic execution engine for Java bytecode, with a formal operational semantics and support for configurable and combined search strategies.
- Evaluated search strategies on a custom benchmark suite, finding that informed and interleaved strategies generally performed better than depth-first and breadth-first search.
- Selected coursework: Language Based Security (9.6/10), Concepts of Programming Language Design (9.5/10), and Program Semantics and Verification (9.4/10).

Utrecht University — Bachelor of Science • Cum Laude (8.96/10)
Computing Science — Utrecht, Netherlands • Sep 2020 – Jul 2023

- Completed the Computing Science Honours Programme after being invited on the basis of high first-year grades.
- Co-developed SecureSECO DAO for the bachelor's Software project, graded 9.0/10. Authored an unpublished paper comparing distributed ledger platforms for SecureSECO as part of the honors program.

- Selected coursework: Functional Programming (10/10), Data Structures (10/10), Languages and Compilers (9.8/10), and Software Testing and Verification (9.4/10).

Publications

Upgradeable diamond smart contracts in decentralized autonomous organizations Dec 2024
Frontiers in Blockchain, Volume 7, Article 1481914
Paul van Vulpen, Hidde Heijnen, Samuel Mens, Thijn Kroon, and Slinger Jansen.

Coauthored peer-reviewed research on community-governed smart-contract upgrades using the Diamond Pattern, with SecureSECO DAO as the case study.
https://doi.org/10.3389/fbloc.2024.1481914

Awards

Graduate Honours Interdisciplinary Seminars
Utrecht University
Completed Utrecht University's Graduate Honours Interdisciplinary Seminars alongside the MSc program; awarded the honors certificate on July 4, 2024.

Best Quickstart dApp · DAO Global Hackathon 2023
Aragon
QuickCode was one of two winners in Aragon's Best Quickstart dApp category for its open-source DAO web application template. Co-developed the template and its documentation.

Selected Projects

Alpha Warden Jul 2022 – Present
- Independently built and maintain a Discord moderation platform used by 300+ servers and serving over 200,000 users.
- Developed the Node.js bot and a Next.js administration dashboard for server configuration and moderation management.

Lead Academy May 2024 – Aug 2025
- Built and maintained data-collection tools and automated B2B lead-generation workflows, integrating PandaMatch, Smartlead, and MillionVerifier.

Konnector Sep 2024 – Nov 2024
- Built an IMAP-based API for tracking and managing email threads with real-time synchronization, enabling email activity to be incorporated into automated workflows.

Autoreach Nov 2023 – Sep 2024
- Built an outreach platform that collected X/Twitter followers and replies, organized prospects into collections, and supported automated, personalized direct messages.
- Integrated AI-based filtering and message generation with a dashboard for managing collections and outreach campaigns.

TI-Basicli Mar 2024
- Implemented a TI-Basic 83 parser and interactive interpreter in Haskell, with file I/O, command completion, and graphical output through Gloss.

Skills

Programming Languages
TypeScript, Python, Java, Haskell, C#, SQL

Frameworks & Libraries
React, Next.js, TanStack Start, Node.js, Express, Puppeteer, JUnit

Cloud, Data & Platform Engineering
AWS, Terraform, Docker, PostgreSQL, CI/CD, Git, WorkOS, Metronome, Stripe, Fivetran, Nango

Languages
English (fluent), Dutch (native), German (B2)
